PROFESSIONAL SUMMARY

Computer Science & Engineering graduate with hands-on internship experience in Android development and full-stack web engineering. Proficient in Python, JavaScript, React.js, and Node.js, with practical exposure to AI/ML frameworks including TensorFlow and Scikit-learn. Demonstrated ability to design and deliver RESTful APIs, data-driven interfaces, and production-ready Android applications. Adept at debugging, performance optimization, and cross-functional collaboration, with a strong foundation in problem-solving and clean, maintainable code.

TECHNICAL SKILLS

Languages: JavaScript, Python, TypeScript, SQL, HTML5, CSS3

Frameworks & Libraries: React.js, React Native, Node.js, Express.js, Flask, Django, Tailwind CSS

Databases: MongoDB, MySQL, SQLite, Room Database

Tools & Platforms: Android Studio, Git, GitHub, VS Code, Postman, Linux, Google Dialogflow

AI / ML: TensorFlow, Scikit-learn, XGBoost, OpenCV, Face Recognition, CNN

INTERNSHIP EXPERIENCE

Full Stack Developer Intern — Gupio 2026

- Developed and maintained scalable web features using React.js, TypeScript, React Native, Tailwind CSS, and Node.js, contributing to multiple product modules in an agile environment.
- Integrated RESTful APIs to bridge frontend and backend services, enabling seamless, data-driven user interfaces with consistent state management and responsive behavior.
- Assisted in database schema validation, resolved critical bugs across the stack, and participated in code reviews, improving overall system reliability and reducing regression issues.

Android Application Developer Intern — MindMatrix.io (CL Infotech Pvt. Ltd.) 2026

- Designed and developed Android applications using Kotlin in Android Studio, adhering to MVVM architecture principles and best-in-class coding standards for maintainability and scalability.
- Built 'Namma-Mela', a real-time theatre ticket booking application featuring live seat availability monitoring, booking management, and an intuitive user interface optimized for performance.
- Executed end-to-end debugging, QA testing, and performance optimization cycles, collaborating with the team to ensure a smooth, crash-free user experience across multiple Android devices.

PROJECTS

Clinical Decision Support System (CDSS) for Chest X-ray Analysis | Python, CNN, TensorFlow, React.js, Django REST API

- Engineered a CNN-based deep learning model for automated pneumonia detection from chest X-ray images, incorporating image preprocessing pipelines and heatmap visualization for clinical interpretability.
- Developed a React.js frontend integrated with a Django REST API backend, featuring user authentication, real-time prediction analysis, and automated diagnostic report generation.

AI-Powered College Enquiry Chatbot | Python, Flask, Google Dialogflow, SQLite, HTML, CSS, JavaScript

- Designed and deployed a conversational AI chatbot using Google Dialogflow to automate student query handling, featuring session-based user authentication and secure password reset functionality.
- Built a Flask backend integrated with SQLite for persistent data management and a fully responsive web interface, enabling real-time natural language chatbot interactions for students.

AI-Based Fake Profile Detection System | Python, Flask, XGBoost, OpenCV, Face Recognition

- Developed a high-accuracy classification system using XGBoost to analyze social media profile attributes and detect suspicious or fake accounts based on behavioral and metadata patterns.
- Integrated OpenCV and Face Recognition libraries for biometric facial verification, and built an interactive Flask interface with enhanced security controls and result visualization dashboards.

EDUCATION

B.E. in Computer Science & Engineering — Navkis College of Engineering, Hassan

CGPA: 9.1

Pre-University (PCMB) — Masters PU College, Hassan

Score: 90%

CERTIFICATIONS

Data Structures & Algorithms — Infosys Springboard | **Artificial Intelligence Basics** — Simplilearn | **Python for Beginners** — Simplilearn
