PROFESSIONAL SUMMARY

Computer Science & Engineering graduate with internship experience in Android and Full Stack development. Proficient in Python, Kotlin, JavaScript, React.js, Node.js, and deep learning frameworks, with strong foundations in building AI-powered applications and RESTful systems. Seeking a role in Software Development, Full Stack, Android, or Technical Support.

TECHNICAL SKILLS

Languages: Python, Kotlin, JavaScript, SQL, HTML5, CSS3

Frameworks & Libraries: React.js, React Native, Node.js, Express.js, Flask, Django

Databases: MongoDB, MySQL, SQLite

Tools & Platforms: Git, GitHub, Android Studio, VS Code, Linux, Windows, Google Dialogflow

AI / ML: TensorFlow, Scikit-learn, XGBoost, OpenCV, Face Recognition, CNN

INTERNSHIP EXPERIENCE

Full Stack Developer Intern — Gupio

2026

- Developed and maintained web features using React.js, TypeScript, React Native, Tailwind CSS, Node.js and REST APIs.
- Integrated frontend and backend services to deliver seamless, data-driven user interfaces.
- Assisted in database schema validation and resolved bugs to improve system reliability.

Android Application Developer Intern — MindMatrix.io (CL Infotech Pvt. Ltd.)

2026

- Developed Android applications using Kotlin in Android Studio, following best coding practices.
- Built a real-time ticket booking application, "Namma-Mela", featuring seat booking and live monitoring functionalities.
- Participated in end-to-end debugging, QA testing, and performance optimization to ensure a smooth user experience.

PROJECTS

Clinical Decision Support System (CDSS) for Chest X-ray Analysis | *Python, CNN, TensorFlow, React, Django REST API*

- Built a CNN-based deep learning model for pneumonia detection from chest X-ray images, incorporating image preprocessing and heatmap visualization for interpretability.
- Developed a React frontend integrated with a Django REST API backend, featuring user authentication, prediction analysis, and automated report generation.

AI-Powered College Enquiry Chatbot | *Python, Flask, Google Dialogflow, SQLite, HTML, CSS, JavaScript*

- Designed an AI chatbot using Google Dialogflow to automate student query handling, integrating user authentication and password reset functionality.
- Built a Flask backend with SQLite for database management and a responsive web interface enabling real-time chatbot interaction.

AI-Based Fake Profile Detection System | *Python, Flask, XGBoost, OpenCV, Face Recognition*

- Developed a classification system using XGBoost to analyze social media profile attributes and detect suspicious or fake accounts with high accuracy.
- Integrated OpenCV and Face Recognition libraries for facial verification; built a Flask interface with enhanced security and visualization features.

EDUCATION

B.E. in Computer Science & Engineering — Navkis College of Engineering, Hassan

CGPA: 9.1

Pre-University (PCMB) — Masters PU College, Hassan

Score: 90%

CERTIFICATIONS

Data Structures & Algorithms

Infosys Springboard

Artificial Intelligence Basics

Simplilearn

Python for Beginners
